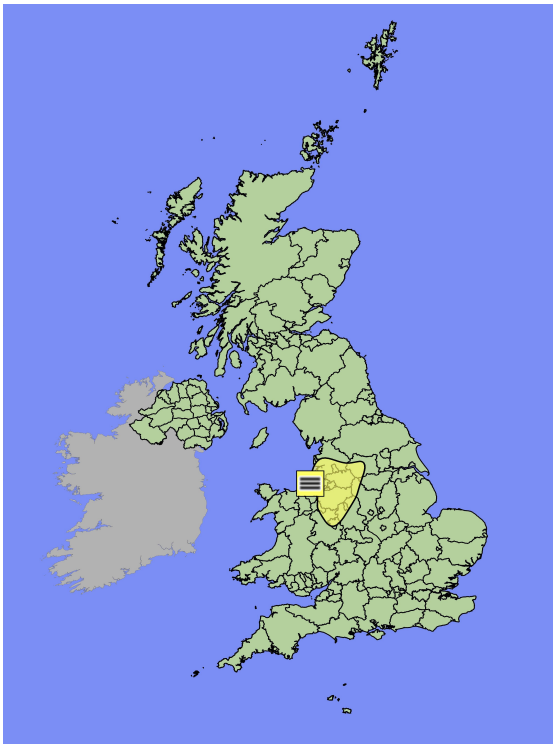
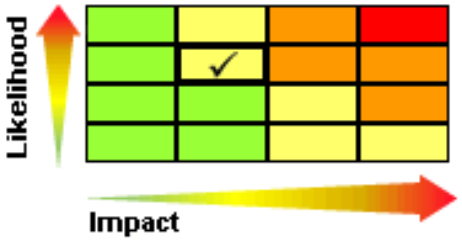
National Severe Weather Warning Service





Chief Forecasters Assessment
Light winds combined with a moist airmass have led to the formation of widespread fog across parts of northwest England and the northwest midlands, affecting the Manchester and Liverpool areas in particular. Visibility will be reduced to less than 100 m in places. The worst of the fog will slowly thin later this morning but some patches will persist right through today.

The Met Office have issued a **Yellow Warning** of **Fog**

Valid from **08:20 on Wed, 09th Jan 2013** until **11:00 on Wed, 09th Jan 2013**

Fog will be widespread and locally dense for much of this morning. The public should be aware that this may cause disruption to travel, including airports, and make driving conditions difficult.
